

Chaima Cherif

Cloud & DevOps Engineering Student

chaima.cherif@esprit.tn | linkedin.com/in/chaima-cherif-50067a253 | +216 55 262 424

PROFILE

Fifth-year IT engineering student at ESPRIT (ArcTIC — Architecture IT & Cloud Computing). Hands-on experience designing, containerizing and deploying cloud workloads on Google Cloud and OpenStack/Kubernetes, with observability (Prometheus, Grafana, Zabbix), infrastructure automation (Ansible), security risk assessment and applied AI. Comfortable owning a project end to end, from architecture to secured cloud deployment.

EDUCATION

Computer Engineering Degree — ArcTIC

ESPRIT, Tunis, Tunisia

2022 – 2027

PROFESSIONAL EXPERIENCE

Cloud & AI Engineering Intern

Sofrecom (Orange Group) — Cloud & DevOps Dept., Tunisia

Jul – Aug 2026

- Designed and built an autonomous AI agent collecting Google Cloud release notes, analyzing criticality, FinOps and security impact, matching announcements to monitored projects and generating actionable recommendations.
- Engineered a modular Python/Flask pipeline: LLM analysis (Groq), semantic deduplication (ChromaDB), risk scoring, SQLite persistence, automated email digests and an Angular 19 dashboard with a compliance-oriented status report and assistant chatbot.
- Containerized and deployed the service on Cloud Run with Artifact Registry, Secret Manager, Cloud Storage and Identity-Aware Proxy; auto-discovered monitored projects via the Service Usage and Resource Manager APIs.
- Built 60 automated tests and an annotated evaluation set for security-impact assessment: 84% criticality accuracy, 97% FinOps-impact and 100% security-impact detection; corrected a systematic under-rating bias via confusion-matrix analysis, improving the reliability of risk reporting.

Technologies: Python, Flask, Angular 19, Google Cloud (Cloud Run, Artifact Registry, Secret Manager, Cloud Storage, IAP), Docker, ChromaDB, Groq LLM, SQLite, Git/GitHub, Linux/WSL2

Cloud & Network Supervision Intern

SOTETEL, Tunis, Tunisia

Jun – Jul 2025

- Deployed a Zabbix Server 6 supervision solution on Ubuntu 24.04 monitoring Linux hosts (Zabbix Agent) and network devices (SNMP, ICMP), with multi-severity triggers and email alerts cutting incident detection to under 60 seconds.
- Built a real-time dashboard (Node.js, Express, Chart.js) on the Zabbix REST API with 5-second refresh; validated against 6 simulated incident scenarios.

Technologies: Zabbix, SNMP, ICMP, Node.js, Express, Chart.js, MySQL, Linux/Ubuntu

Full-Stack Developer Intern

Tekru Technologies, Tunisia

Jun – Jul 2024

- Developed a travel management web application: Next.js/Tailwind CSS frontend and GraphQL API (Node.js/TypeScript) with MySQL, delivered across a full Agile/Scrum lifecycle.

Technologies: Next.js, Tailwind CSS, GraphQL, Node.js, TypeScript, MySQL

SELECTED PROJECTS

Private Cloud Infrastructure & SDG Web Platform

ESPRIT — Academic Project

Oct 2025 – May 2026

- Architected a private IaaS cloud with OpenStack; containerized workloads with Docker and orchestrated them on Kubernetes (auto-scaling, self-healing); automated provisioning with Ansible.
- Implemented observability with Prometheus and Grafana, integrated AI/ML models for performance optimization and delivered a Spring Boot + Angular platform over a 20-week Agile cycle.

Technologies: OpenStack, Kubernetes, Docker, Ansible, Prometheus, Grafana, Spring Boot, Angular

Workflow — HR & Incident Management System

ESPRIT — Academic Project

Jan 2025 – Present

- Built a hybrid desktop/web HR platform (Symfony + JavaFX); owned the incident management module with automated SMS/email notification APIs and a chatbot assistant.

Technologies: Symfony, JavaFX, PHP, MySQL, SMS API

TECHNICAL SKILLS

Cloud & DevOps: Google Cloud Platform (Cloud Run, Artifact Registry, Secret Manager, Cloud Storage, IAP), OpenStack, Kubernetes, Docker, Ansible, CI/CD

Security & Compliance: IAM/Identity-Aware Proxy, Secret Manager, vulnerability & risk

Monitoring & Observability: Prometheus, Grafana, Zabbix, SNMP/ICMP monitoring

AI / Data: LLM integration & prompt design (Groq), embeddings & semantic search (ChromaDB), evaluation sets & metrics

Systems: Linux networking, Linux/Ubuntu, WSL2

Development: Python, Java, C/C++, PHP, JavaScript, TypeScript, SQL | Flask, Spring Boot, Symfony, Node.js, Next.js, Angular, JavaFX, PowerShell

APIs: REST, GraphQL

Databases: MySQL, SQLite, ChromaDB (vector DB)

Tools & Methods: Git/GitHub, Agile/Scrum, automated testing, technical documentation, CI/CD pipeline hardening

Certifications & Coursework: Cisco Networking Academy — CCNA2 | Network Security Certification Prep (ESPRIT, current semester)

ASSOCIATIVE EXPERIENCE

Inceptum Junior Enterprise

Consulting & project management

2023 – 2025

Enactus EMC

Social entrepreneurship

2022 – 2023
